PROFESSIONAL SUMMARY

Computer Science student who builds real software with AI agents — and measures them: a benchmark harness that graded 286 Claude Code runs, and a local workspace that routes tasks between AI coding agents by role, cost and quota. I ship what I build, from a cross-platform Flutter app with its own tooling to an Electron app with installers and end-to-end tests. Looking for an AI internship in LLM tooling, agents and evaluation.

TECHNICAL SKILLS

AI & LLM: Claude Code, Claude CLI, OpenAI Codex, Cursor & Cursor CLI, Google Antigravity, Mistral API, Ollama, GitHub Copilot, ChatGPT · agent orchestration, LLM evaluation & benchmarking, prompt and context engineering, Claude Code hooks

Programming: Python, Java, C++, C#, SQL, Bash, UML · working with AI agents in Dart, TypeScript / JavaScript and PowerShell

Frameworks & Platforms: Flutter, Electron, Node.js, React, Java Spring, Vite, Vitest, Playwright

Tools & Systems: Git / GitHub, GitHub Actions (CI), GitHub Pages, Docker, Linux (Mint), Termius, Tailscale, Wireshark, Vertabelo, Microsoft 365, Notion, Obsidian, XMind, Adobe Photoshop, Audacity, Discord (incl. bot development)

Concepts: OOP, Data Structures, Algorithms, Relational Databases, Statistical Data Analysis, Computer Networks

EDUCATION

Polish-Japanese Academy of Information Technology (PJAIT) **Oct 2024 – Mar 2028 (expected)**

BSc in Computer Science · Warsaw, Poland

Relevant coursework: Artificial Intelligence Tools, Algorithms & Data Structures, Object-Oriented Programming & GUI, Fundamentals of Python Programming, Foundations of Java Programming, Statistical Data Analysis, Relational Databases, Database Systems, Computer Networks & Network Programming in Java, Operating Systems, Information Systems Design, Java Spring, C#, UML.

PROJECTS

Project Lea — Claude Code Benchmark & Configuration · Python, Node.js, PowerShell

github.com/hero-999-dev/Project-Lea · reports: hero-999-dev.github.io/project-lea-web

- Built a resumable benchmark harness for Claude Code: **286 graded agent runs** over five task types, seven configurations and two models (Sonnet, Opus), marked by hidden test suites and a real browser driven over CDP, plus a round on a live production site.
- The result, Lea, is a 226-word SessionStart hook with no plugins that matched or beat 6,000-token plugin stacks at 13–53% lower cost; one rewritten paragraph took the hard round from 4/20 to 13/20 correct.
- In real use: over 370 measured requests Lea cost $3,127 against $4,250 for the previous config — **$1,123 saved, a 26% reduction**.

AI Orchestra — Local Workspace for AI Coding Agents · TypeScript, Electron, React

github.com/hero-999-dev/ai-orchestra

- A desktop app that runs Claude Code, Codex, Cursor's agent, the Mistral API and shells side by side as live terminals on a canvas, and lets them hand work to each other through one orchestrator that routes tasks by role, cost and quota.
- Runs QA against the project's real test runner with bounded escalation to a stronger model and explains every automatic decision in the UI. Local daemon with SQLite, 44 unit tests, Windows installers.

Pixel Pomo — Pixel-Art Pomodoro Ecosystem · Flutter / Dart, Python

github.com/hero-999-dev/pixel_pomo · pixel-pomo-web · pixel_pomo_art_kit · pixel_pomo_dev_kit

- One Flutter codebase for Android and iOS with a custom 2.5D garden engine, Android live wallpaper, app blocker, statistics with charts, a coin shop, six themes, six languages and in-app updates; the same app also runs in the browser on GitHub Pages.
- Two desktop tools for the game's artists, built by CI for Windows and macOS: a pixel editor with byte-identical exports, and a kit that previews sprites and MagicaVoxel models inside the real game engine.

Nebula — Desktop Notes App · Electron, JavaScript

github.com/hero-999-dev/nebula

- A notes app for Windows and macOS with a full editor (equations, code blocks, shapes, find), a PIN or passkey app lock, encrypted note vaults and an ASCII "Universe" map of notes; covered by Playwright end-to-end tests that drive the real Electron app, with in-app updates.

LANGUAGES

Turkish — Native · **English** — Upper-Intermediate (B2) · **Polish** — Beginner (A1)

ACTIVITIES & INTERESTS

Game tester on gametester.gg (Lionbridge Games) · volunteer Scratch educator at Okul Destek Derneği · university American Football team (2 years) · YouTube content creator · Cinema Club organizer and Discord community manager.
